

# DODODUM Mini Heat Press Quick Guide

1. Plug in the Mini Heat Press
2. Select the heat setting that corresponds with the material and project you want to create. (See chart below)
3. Cut the vinyl/transfer you want to use and then place it on your object you want to press. If it's shoes or hat or a small surface you want something to be able to press on to. A pair of socks works best!

4. Once the light turns green it's time to carefully press. Spraying a small amount of water before every Ironing will make your work simpler.
5. Carefully, glide the Mini Heat Press around your project until full adhered and the plastic lifts up with ease!

## HEAT SETTINGS CHART

DODODUM Mini Easy Press machine has 3 heat settings to meet your all different heat transfer demands.

**Low** — 284F(140C), for lightweight, delicate, synthetic, or heat-sensitive fabrics; also great for more delicate heat-transfer vinyl, such as Foil Iron-On.

**Medium** — 320F(160C) for most fabrics and heat-transfer vinyl

**High** — 374F(190C) for Infusible Ink projects and blanks

## WARNING !

Heat Presses operate at high temperatures that can cause burns or other injury. Use with extreme caution. **CAUTION:** Risk of electric shock. Do not open, modify, or tamper with press. Always turn press OFF before plugging or unplugging from the electrical outlet. Never pull on the cord to disconnect press from the electrical outlet; instead, grasp the plug and pull to disconnect press. Do not immerse in water or use in wet conditions
